

SANJAY G HEGDE

DevOps Engineer | Cloud and CI/CD Automation

Bengaluru, India | +91 8073724218 | sanjayhegde1636@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science graduate (B.E. 2026, CGPA 8.59) and DevOps intern. I build CI/CD pipelines in Jenkins, containerize Java and Spring Boot applications with Docker, and deploy them on AWS EC2 and on Kubernetes clusters set up with kubectl and K3s. I provision infrastructure with Terraform, configure servers with Ansible, and monitor them with Prometheus, Grafana and Loki. Comfortable debugging real failures: image pull errors, pending pods, nodes that will not join. Looking for an entry-level DevOps or Cloud Engineer role.

EDUCATION

B.E., Computer Science and Engineering, KLS VJIT (VTU), Haliyal

2022 - 2026

CGPA: 8.59 / 10

SKILLS

Cloud (Amazon Web Services, AWS): EC2, S3, IAM, VPC, Subnets, Security Groups, RDS, Auto Scaling, Application Load Balancer, CloudWatch, SNS
CI/CD (Continuous Integration and Continuous Delivery) and Version Control: Jenkins, declarative pipelines, Jenkinsfile, GitHub Webhooks, Maven, Git, GitHub

Containers and Orchestration: Docker, multi-stage builds, Docker Compose, Docker Hub, Kubernetes, kubectl, K3s, kubernetes, Deployments, Services, Ingress, ConfigMaps, Secrets, HPA, rolling updates, blue-green deployment

Infrastructure as Code and Automation: Terraform, Ansible, configuration management, Shell scripting (Bash), YAML, Groovy (Jenkinsfile)

Monitoring and Logging: Prometheus, Grafana, Loki, Prometheus, CloudWatch

Practices: CI/CD automation, containerization, container orchestration, observability, high availability, scalability, secrets management, backup and recovery, release rollback and rollout, SDLC from commit to production, root cause analysis, incident troubleshooting.

Languages and Web: Java, SQL, HTML, CSS

Linux and Networking: Linux / Unix administration (Ubuntu), SSH, DNS, TCP/IP, firewalls, Nginx reverse proxy, Apache Tomcat

Soft Skills: Problem solving, troubleshooting, analytical thinking, collaboration, teamwork, communication, documentation, adaptability

PROFESSIONAL EXPERIENCE

DevOps Intern, JSpiders, Rajajinagar, Bengaluru

Jan - July 2026

- Set up **5-stage Jenkins pipelines** (checkout, Maven build, test, Docker image push, deploy) wired to GitHub webhooks, so deploys are no longer run by hand.
- Wrote **Dockerfiles** for Spring Boot and Tomcat applications, tagged the images, pushed them to Docker Hub and ran them on AWS EC2.
- Created **Kubernetes** Deployments, Services, ConfigMaps and Secrets, and shipped new versions with kubectl set image, so releases stay online.
- Worked with 7 AWS services on Linux servers: EC2, IAM, VPC, Auto Scaling, Application Load Balancer, CloudWatch and SNS.
- Automated repetitive server setup with **shell scripts**, and debugged failed builds, image pulls and containers that would not start.

PROJECTS

Automated Kubernetes Deployment for Java Web Application | Terraform, Ansible, Docker, Kubernetes (K3s), Nginx

[GitHub](#)

- Provisioned AWS infrastructure for a self-managed Kubernetes (K3s) cluster with Terraform (VPC, subnets, security groups, EC2, S3), and configured the nodes with Ansible so the environment rebuilds from Git instead of console clicks.
- Containerized a Java web application with Docker and deployed it as a Kubernetes Deployment and Service behind an Nginx Ingress with ConfigMaps and Secrets; released with kubectl set image and rolled back with kubectl rollout undo.

CI/CD Pipeline Automation for Spring Boot Application | Jenkins, Maven, Docker, HPA, Shell scripting

[GitHub](#)

- Designed a declarative Jenkins pipeline for a Spring Boot application, triggered by GitHub webhooks: checkout, Maven build, multi-stage Docker image build and push to Docker Hub.
- Added a Horizontal Pod Autoscaler and rolling updates so the application keeps serving traffic under load and during releases.

DevOps Pipeline Dashboard | Jenkins, Docker, Kubernetes, Maven, GitHub Webhooks

[GitHub](#)

- Reads whichever cluster a signed-in developer connects in the browser, by service account token or uploaded kubeconfig, and tails pod logs live over Server-Sent Events.
- Runs on Kubernetes behind a Service and Ingress, released with kubectl set image and rolled back with kubectl rollout undo. Alerts come from cluster state: CrashLoopBackOff, ImagePullBackOff, pending pods and NotReady nodes.

ACADEMIC PROJECT

- Deep Learning Based Disease Detection Using Facial Features** | Python, VGG-Face, ResNet, SQLite. Final-year project that classifies diseases from facial images using transfer learning on a small medical dataset. Handled image preprocessing, model training and evaluation.

ACHIEVEMENTS

- Student project sponsored by **KSCST** under the 49th Series Student Project Programme.
